

Message from the President

Dear Colleagues, Researchers, and Global Visionaries,

It is a distinct pleasure to welcome you to Vol. 04, Issue 02 (April–June 2026) of *Eduphoria: An International Multidisciplinary Magazine*. As we step into the second quarter of 2026, the global academic landscape is no longer just "evolving"—it is being fundamentally rewritten. At the International Council for Education, Research and Training (ICERT), we have always believed that the most profound discoveries don't happen in isolation; they occur at the messy, exciting intersections where different fields of study collide. This issue of *Eduphoria* is a vibrant reflection of that belief.

Rigour in a Rapid World

In an age where information moves at the speed of thought, the value of a peer-reviewed, refereed international magazine (ISSN: 2960-0014) cannot be overstated. Our commitment to academic integrity remains our North Star. As President, I am proud to see that *Eduphoria* continues to uphold the highest standards of scholarship, ensuring that every article we publish is not only innovative but methodologically sound and ethically grounded.

The 2026 Research Paradigm

The papers within this volume highlight a crucial trend we are seeing across the globe: The Human-Technology Synthesis. We are moving beyond just using tools; we are researching how these tools redefine our social fabric, our educational systems, and our very identities. Whether it is sustainable development, digital humanities, or the hard sciences, the common thread in this issue is a commitment to solving real-world problems through a multidisciplinary lens. "Scholarship is the art of looking at the familiar and seeing the extraordinary. It requires the courage to ask 'why' and the discipline to find the 'how'."

A Community of Excellence

I want to extend my deepest gratitude to our Editorial Board and our Global Reviewer Panel. Your "behind-the-scenes" work is the bedrock upon which our reputation is built. To our contributing authors: thank you for choosing *Eduphoria* as the home for your intellectual labor. Your curiosity is what drives the progress of our civilization. As you engage with the insights in this issue, I challenge you to read one article entirely outside your area of expertise. You might be surprised by how a perspective from another discipline can provide the missing piece to your own research puzzle.

Onward to new horizons of knowledge.

With warm regards,

Prof. (Dr) Sandeep Kumar

President, ICERT
